

WORKING TOOLS

The right brush

Discover how you can achieve a perfect painting result with only little effort: the secret is choosing the right brush.

You want to repaint old wooden windows or renovate the wooden facade of your house but don't know which brush is best for the job? ADLER shows you what to do!

The right brush:

When buying a brush you should always base your decision on the product you want to work with:

For **solvent-based paints** and finishes it is best to use brushes with thick bristles in order to avoid applying too much material on the surface. **Brushes for solvent-based paints and finishes.**

For water-based paints and finishes however you better use brushes whose bristles are split at the ends. This way more material is applied and the paint spreads better. **Brushes for water-based paints.**

To help you find the right brush for the every situation the ADLER team created this list:

Wooden facades

- **Solvent-based paint**
 - small areas: **Solvamaxx Plus 50 mm**
 - large areas: **Solvamaxx Plus 100x30 mm**
- **Water-based paint**
 - small areas: **Lackpinsel 40 or 60 mm**
 - large areas: **Lackpinsel 100 mm**
